Data Assessing

About Company

- Magicbricks is India's leading online real estate platform that connects property buyers, sellers, and renters. It offers verified listings, market insights, price trends, and smart tools to help users make informed property decisions. Magicbricks simplifies property search by providing trusted information, advanced filters, and expert guidance across residential and commercial real estate markets.

□ Data Card: MagicBricks Property Dataset (Sample)

Dataset Name

MagicBricks Residential Property Listings – Sample Data

Dataset Description

This dataset is a **sample of residential property listings** sourced from MagicBricks. It contains structured information about apartments and builder floors in **Karol Bagh, Central Delhi**, including property size, configuration, furnishing status, price, and transaction details.

Number of Records

- 5 property listings
-

Number of Features

- 14 attributes
-

Feature Description

Column Name	Description
Area	Built-up area of the property (in sq. ft.)
BHK	Number of bedrooms
Bathroom	Number of bathrooms
Furnishing	Furnishing status (Furnished)
Location	Area name
District	Administrative district
Locality	Specific locality or project name
Parking	Number of parking spaces
Status	Property possession status
Transaction	Transaction type (Resale / New Property)
Type	Property type (Apartment / Builder Floor)
Per_Sqft	Price per square foot
Price	Total property price
Index	Row identifier

Types of Data Errors

1. Completeness Errors

- Occur when **required data is missing**
- Values may be `NULL`, blank, or not recorded

Examples:

- Missing age of a customer
 - Empty salary field
 - Address not provided
-

2. Validity Errors

- Occur when data **does not follow defined rules, constraints, or data types**

Examples:

- Number of children stored as `float` instead of `integer`

- Duplicate values in a unique column (e.g., `patient_id`)
 - Salary recorded as `-10000`
 - Age recorded as a negative value
-

3. Accuracy Errors

- Data is **technically valid** but **factually incorrect or unrealistic**

Examples:

- Body weight of an adult recorded as `13 kg`
 - Age recorded as `200 years`
 - Height recorded as `20 cm` for an adult
-

4. Inconsistency Errors

- Same information stored in **different formats or representations**

Examples:

- `New York City, NYC, NewYork`
 - Name variations: `Gaurav` → `Gauri`
 - Gender stored as `M, Male, male`
-

□ Summary Table

Error Type	Description	Example
Completeness	Missing data	Age = NULL
Validity	Rule or datatype violation	Salary = -10000
Accuracy	Unrealistic values	Age = 200
Inconsistency	Multiple formats	NYC vs New York City

□ Types of Data

1. Dirty Data

Data with **quality issues**.

- **Completeness** – missing values
 - **Validity** – wrong data type, negative age/salary
 - **Accuracy** – unrealistic values (age = 200, adult weight = 13 kg)
 - **Inconsistency** – same data in different formats (NYC / New York City)
-

2. Messy Data

Data with **structural issues**.

- **Pivoted structure** (months as columns)
 - **Sparsity issue** (too many NULLs)
 - **Wide tables**
-

□ Key Point

- **Dirty Data** → value problems
 - **Messy Data** → structure problems
-

dtypes: float64(4), int64(2), object(7)
memory usage: 123.4+ KB
```

□ Data Quality Observations

- The dataset contains **null (missing) values**.
 - **Bathroom** is stored as a **float**, which is a **validity issue** since it should be an integer.
 - **Parking** is also stored as a **float**, indicating a **data type validity issue**.
 - The dataset consists of **6 numerical features** and **7 categorical (object) features**.
-

```
# Seeking description
```

```
df.describe()
```

	Area	BHK	Bathroom	Parking
Per_Sqft \				
count	1214.000000	1214.000000	1212.000000	1182.000000
mean	1451.850751	2.778418	2.523927	1.708122
std	1586.472855	0.946811	1.017723	5.717177
min	28.000000	1.000000	1.000000	1.000000
25%	800.000000	2.000000	2.000000	1.000000
50%	1150.000000	3.000000	2.000000	1.000000
75%	1620.000000	3.000000	3.000000	2.000000
max	24300.000000	10.000000	7.000000	114.000000

	Price
count	1.214000e+03
mean	2.079898e+07

50%	1.400000e+07
75%	2.500000e+07
max	2.400000e+08

- **Accuracy issues identified in the dataset:**
 - The **Area** column shows extreme values, with a minimum of **28 sq ft** and a maximum of **24,300 sq ft**, which requires validation.
 - Properties with **10 BHK** need to be reviewed, as such configurations are rare and may be data entry errors.
 - A record showing **114 parking spaces** is highly unrealistic and indicates a possible accuracy issue.
- House prices range from **₹10 lakh to ₹24 crore**

```

Exploratory Analysis

Univariate analysis

num

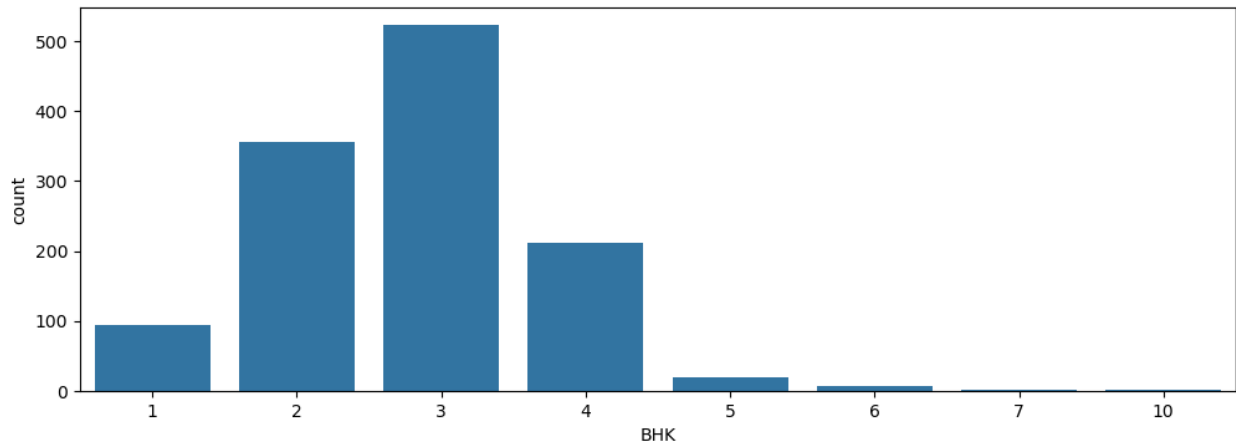

#BHK

```
plt.figure(figsize=(12,4))
sns.countplot(data=df,x='BHK')
temp=df.BHK.value_counts().reset_index()
temp

px.pie(temp,names='BHK',values='count',
        color_discrete_sequence=px.colors.sequential.Blues,
        height=400,title='Distribution of BHK')
# feature egg ---> 5,6,7,10 --> 4+ BHK Entries
```

Distribution of BHK

Key Insights

- 3 BHK apartments have the highest number of listings on MagicBricks, indicating strong demand and builder preference.
- 2 BHK units follow closely, driven by affordability and suitability for smaller or nuclear families.
- 4 BHK and 1 BHK configurations show moderate to low availability, reflecting niche demand.
- Very few listings exist for 5, 6, 7, and 10 BHK units, indicating low demand and a more luxury-focused market segment

```
df.Bathroom.value_counts()  
plt.figure(figsize=(12,4))  
sns.countplot(data=df,x='Bathroom')  
plt.title('Distribution of Bathroom')  
plt.show()
```

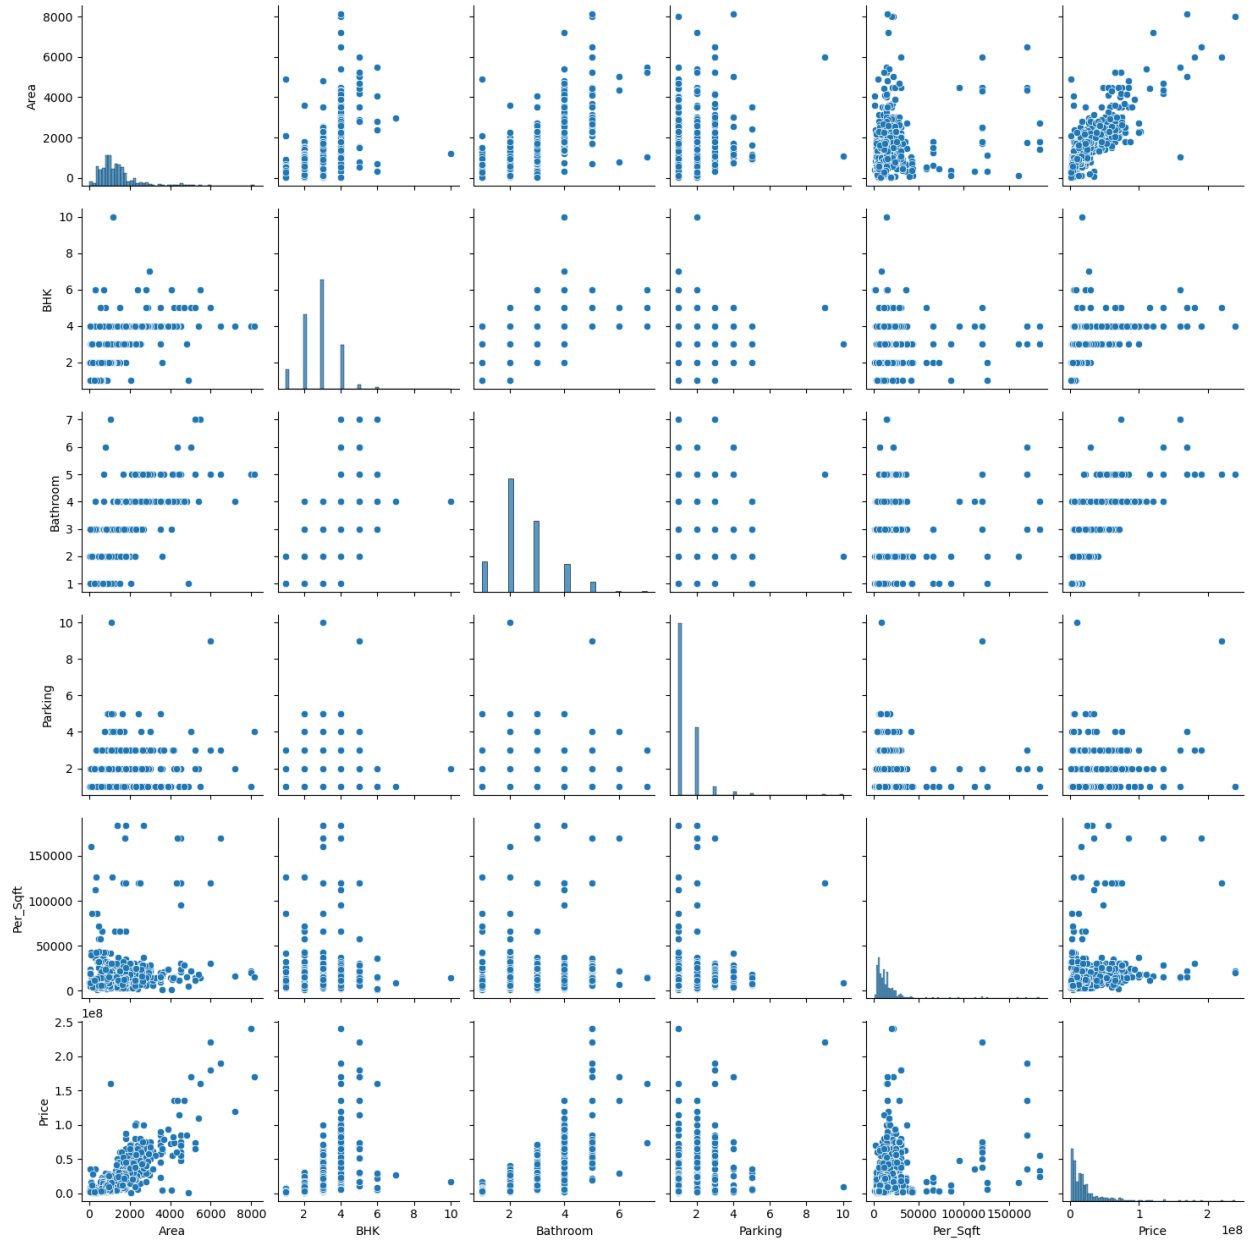

Key Observations

- Properties with 2 bathrooms have the highest number of listings, followed by 3-bathroom configurations, indicating common residential preferences.
- 1-bathroom and 4-bathroom units show almost similar listing counts, suggesting moderate demand.
- 5, 6, and 7 bathroom configurations are extremely rare, reflecting limited availability and niche demand.
- The overall distribution suggests that most listings are apartment-type properties rather than large independent houses.

```

```

```
sns.pairplot(df)  
plt.show()
```

```
# corr
# heat map
sns.heatmap(df.corr(numeric_only=True), cmap="Blues", annot=True)
plt.show()
```

Correlation Insights

- **Price and Area** show a very strong positive correlation (**0.84**), indicating that larger properties are priced significantly higher.
- **BHK and Bathroom** have strong correlations with both **Area** and **Price**, reflecting that bigger homes generally include more rooms and bathrooms, which increases property value.
- **Per Sqft Price** and **Parking** exhibit weak or negligible correlations with most other variables, suggesting limited influence on overall pricing and property size patterns.

4	North West Delhi	122
5	Shahdara	75
6	South East Delhi	59
7	Central Delhi	32

Location-wise Property Listing Analysis

- **South Delhi** records an exceptionally high number of property listings, clearly dominating the market in terms of supply.
- **South West, East, West, and North West Delhi** show comparable listing volumes, each ranging roughly between **100–125 listings**, indicating balanced availability across these regions.
- **Central Delhi** has the lowest number of listings, reflecting limited housing supply in this area.

```
# Location
# price
# bivariate analysis
df.loc[:, ['Location', 'Price']].sample(5)
```

	Location	Price
358	Alaknanda	14000000
1077	Alaknanda	18500000
1024	Lajpat Nagar	30000000
62	Shahdara	1900000
1157	Paschim Vihar	8600000

```
temp=df.groupby('Location')
['Price'].mean().sort_values(ascending=False).reset_index()
plt.figure(figsize=(12,7))
sns.barplot(data=df,y='Location',x='Price',
            ci=False,order=temp.Location)
plt.show()
```

Location-wise Property Listing Analysis

- **Friends Colony** and **Hauz Khas** have the highest number of property listings, indicating strong housing supply and high market activity in these prime locations.
- **Greater Kailash, Janakpuri, and Safdarjung Enclave** also show relatively high listing counts, reflecting consistent demand in well-established residential areas.
- **Mid-range locations** such as Lajpat Nagar, Malviya Nagar, and Karol Bagh display moderate availability, suggesting balanced market conditions.
- **Narela, Uttam Nagar, and Budh Vihar** record the lowest number of listings, indicating limited property supply or lower market participation in these areas.

```
temp=df.Furnishing.value_counts().reset_index()
px.pie(temp,names='Furnishing',
        ,values='count',title='Distribution of Furnishing',hole=0.4,
        color_discrete_sequence=px.colors.sequential.RdBu).show()

temp2= df.groupby('Furnishing')['Price'].median().reset_index()

px.bar(temp2,x='Price',y='Furnishing',title='Price wise comparision of
Furnishing',
        color_discrete_sequence=px.colors.sequential.RdBu).show()
```

Distribution of Furnishing

Price wise comparison of Furnishing

Furnishing-wise Property Analysis

- **Semi-Furnished properties** dominate the market, accounting for the largest share of listings ($\approx 55.9\%$), indicating strong buyer preference for partially equipped homes.
- **Unfurnished properties** form a significant portion ($\approx 29.6\%$), appealing to buyers who prefer customization or lower upfront costs.
- **Fully Furnished properties** are the least common ($\approx 14.5\%$), suggesting limited supply or higher pricing constraints.
- In terms of price, **Semi-Furnished homes command the highest average prices**, followed by **Furnished**, while **Unfurnished properties** are comparatively more affordable.

```
df.Transaction.value_counts()  
colors = ['#1F3A5F', '#2EC4B6'] #deep red, muted blue  
sns.countplot(data=df, x='Transaction', hue='Type', palette=colors)  
plt.show()
```

Transaction-wise Property Type Analysis

- **Resale properties** are dominated by **Apartments**, indicating higher availability and activity in the secondary housing market.
- **New Property transactions** show a stronger presence of **Builder Floors**, suggesting preference for newly constructed independent-style units.
- Overall, **Apartments are more common in Resale**, while **Builder Floors are more prevalent in New Property listings**, highlighting a clear market segmentation by property type.

Conclusion

This exploratory data analysis reveals clear patterns in Delhi's real estate market. Property prices are strongly influenced by **area, BHK, and number of bathrooms**, confirming that larger and more spacious homes command higher values. **Location plays a crucial role**, with premium areas and South Delhi dominating property listings, while central and peripheral regions show limited supply.

The market shows a strong preference for **semi-furnished properties**, both in availability and pricing, indicating buyer demand for ready-to-move yet customizable homes. Additionally, **transaction type and property type** are closely linked—apartments dominate resale transactions, whereas builder floors are more prevalent in new property listings.

Overall, these insights highlight how **size, location, furnishing, and transaction type** collectively shape pricing and availability, providing a solid foundation for further predictive modeling and decision-making in the real estate domain.
